REIMAGINING HOW **INDIA** DESIGNS, BUILDS & TRANSFORMS

India is building at extraordinary scale.

Highways are changing how cities connect. New commercial districts are changing where people work. Factories, housing, transport networks and public infrastructure are reshaping cities and creating entirely new ones.

But building more is only half the challenge.

HOW DO WE BUILD **BETTER?**

As projects become larger and timelines become tighter, architects, engineers, developers and construction teams are being asked to solve increasingly complicated problems.

- *How do hundreds of people working on the same project make better decisions together?*
- *How do you identify a problem before it reaches the construction site?*
- *How do you make sure the building being designed, the building being constructed and the building eventually being operated are not three different versions of the same idea?*
- *And what changes when AI begins entering that process?*

THESE AREN'T SIMPLY TECHNOLOGY QUESTIONS.

THEY ARE DESIGN QUESTIONS.

And they could define the next chapter of India's built environment.

WHY **PUNE?**

Pune offers an especially interesting place to have this conversation. It is a city constantly negotiating between what it has been and what it wants to become.

Its cultural and architectural identity exists alongside expanding technology hubs, industrial corridors, new housing, transport infrastructure and a rapidly evolving metropolitan footprint. That tension is not unique to Pune.

CITIES ACROSS INDIA FACE ESSENTIALLY THE SAME QUESTION:

How do you accommodate the future without losing what made a place work in the first place?

Technology will increasingly shape the answer.

BIM is moving beyond 3D modelling. Cloud collaboration is changing how multidisciplinary project teams work together. Digital twins are giving physical assets parallel digital lives. Connected data is changing how information moves between architects, engineers, contractors and developers. And AI and automation are beginning to influence how projects are imagined, designed and delivered.

But technology alone doesn't create better cities or better buildings.

PEOPLE DO.

WHAT IS DESIGN **INDIA** FORWARD?

Design India Forward Forum is an Autodesk India platform that brings together the people who design, engineer, build and commission India's physical future. But this isn't simply a conversation about software. It's a conversation about what software makes possible.

- ***Can projects be tested before they're built?***
- ***Can construction problems be identified before they become construction delays?***
- ***Can architects, engineers and contractors work from the same version of reality?***
- ***Can data become as important to infrastructure as concrete and steel?***
- ***And can AI fundamentally change the way India designs what comes next?***

Design India Forward brings together leaders from architecture, engineering, construction, real estate, infrastructure, technology and government to explore these questions and the ideas already beginning to answer them.

Because India's next design revolution may not be about creating more ambitious buildings.

It may be about creating a better way to build them.

WHO SHOULD BE IN THE **ROOM**

DESIGN INDIA FORWARD

is for the people making decisions about what India builds and how India builds it:

- Architects & Design Leaders
- Engineering Leaders
- Construction & Project Leadership
- BIM & Digital Engineering Leaders
- EPC Companies & Contractors
- Infrastructure Developers
- Urban Planners & City Development Leaders
- Government & Public Infrastructure Stakeholders
- Technology & Digital Transformation Leaders
- Prop-Tech and Con-Tech Innovators
- CXOs & Business Leaders

AGENDA

8:45 – 9:45 AM

ARRIVE. CONNECT. EXPLORE.

9:45 – 10:00 AM

WELCOME TO DESIGN INDIA FORUM

10:00 – 10:15 AM

Chief Guest Address:

THE VISION FOR TOMORROW: What Will It Take to Build India's Next Generation of Infrastructure?

10:15 – 10:30 AM

FROM 2D TO BIM: Connecting Vision to Delivery: Can BIM Transform the Way India Builds?

A conversation exploring the role of BIM in transforming the way infrastructure is designed, coordinated and built.

10.30 – 11.20 AM

THE BIG CONVERSATION (Panel): Unlocking Design Potential: The Future of BIM Adoption in India's Infrastructure Landscape

DISCUSSION THEMES:

- **Beyond Drawings:** How can BIM improve project efficiency and delivery?
- **Better Coordination:** Can integrated models reduce clashes and minimise rework?
- **Cost and Resource Optimisation:** How can better information lead to smarter decisions and reduced project costs?
- **Designing for Sustainability:** How can BIM integrate sustainability considerations into project planning and execution?
- **From Adoption to Transformation:** What will accelerate BIM adoption across India's infrastructure ecosystem?

11.20 – 11.45 AM

Design Panel: Redefining Design Excellence: AI, BIM and the Future of Digital Innovation

- **AI-Driven Design:** Transforming Creativity, Accuracy and Decision-Making
- **BIM for Integrated Design:** Enhancing Collaboration Across Architecture, Engineering and Construction
- **Generative Design and Automation:** Accelerating Innovation Across the Design Lifecycle
- **Digital Twins and Predictive Intelligence:** Bridging Design, Construction and Operations
- **Sustainable Design Through Digital Innovation:** Optimising Resources and Improving Building Performance

11.45 – 12.30 PM

BEYOND THE MODEL: Turning Digital Design into Real-World Outcomes

Autodesk Solution Showcase & Autodesk India Country Kit

12.30 – 12.45 PM

GUEST OF HONOR'S Address

12.45 PM onwards

NETWORKING LUNCH

Continue the conversations that began in the room. Connect with industry peers, exchange perspectives and explore new possibilities for collaboration.
